Raub Hole prospects good. The above crushing, which is just about three-eighths of an ounce to the ton, his been derived chiefly from the lower level of the Western lode, with perhaps a smull portion of the stone got in approaching the new Raub Hole workings from the new shuft. It represents about the average value of the Western lode stuff, on which no very great improvement for the present can be expected, until a third level is driven about 100 ft. lower. But this Mr Bibby will not be inclined to do until he has fairly got into the Raub Hole formation, and has resumed the getting of returns on the old scale. As Stope appears to be the same sort of place as the Raub Hole, from what we could see on our visits to the old open working there, and as there should be no difficulty in getting fair stone from the workings about to be again prosecuted at Bukit Roman, which is on the right hand further up the concession track beyond Stope, we should not be surprised to see the next retarn average out a long way botter than this. The new winding gear will be running on the Raub hole shaft which will mean a big difference on the amount of stuff to be moved and brought up to the surface. On timing them it took eight minutes for the Javanese windlass men on the brace to heave up a bucket of stoff from the 170 feet level at the Western The Colonial Surgeon-When the ori-Lode, and whether it was mullock or crushing stuff it had to come up, except what was wanted for filling in the stopes as they were worked out.
